

**PHOTOGRAPHIC-QUALITY PRINTS AND METHODS
FOR MAKING THE SAME**

Abstract of the Disclosure

5 A method for creating photographic-quality prints and prints produced by
these methods are disclosed. The prints generally comprise three layers: a
transparent carrier; an image, and a particle-based undercoat. The transparent
carrier comprises a substrate for receiving an image. The image can be
produced by inkjet, electrostatic, or other imaging methods, including reverse
10 printing methods. The particle-based undercoat layer is applied to the image
containing side of the transparent carrier. Also disclosed is an apparatus for
producing said prints by methods of the present invention.
